Conversion Utilities

Utilities to convert between all different variants to reference files or similar artifacts.

Each conversion method exists in two variants:

- `to`TargetType`(`SourceType`)` returns `null` if the conversion is unsuccessful.
- `as`TargetType`(`SourceType`)` throws a `UnconvertibleException` if the conversion is unsuccessful.

ConversionUtils
: Converts Java URIs, Java URLs, Java Files, and Java Paths.

UriUtils
: Adds EMF URIs to *ConversionUtils*.

ResourceUtils
: Adds Eclipse IResources and Eclipse IPaths to *ConversionUtils*.

UriResourceUtils
: Combines *ConversionUtils*, *UriUtils*, and *ResourceUtils*.

Load Helpers

Helpers to find and read resources (a.k.a. files) in different contexts, e.g. file system, classloader, Eclipse workspace, OSGi bundles, …

FilesystemClassloaderLoadHelper
: Loads resources either from file system or classloader.

WorkspacePluginLoadHelper
: Finds resources in the workspace or plug-ins.

Miscellaneous Utilities

EmfStringRenderer
: Creates a human-readable tree-like text rendering of EMF contents.

WorkspaceUtils
: Utilities for Eclipse Workspace; currently: Executes some work only after all workspace changes are done.

ContentTypeUtils

Utilities for handling Content Types in an Eclipse Workspace.

NewlineNormalizer

Replaces all newline variants with one single variant.

Test Utilities

Assert2

Extensions to JUnit's Assert; currently: `assertEquals()` with normalized newline.

AssertFile

Extensions to JUnit's Assert to check files and their contents.

AssertInputStream

Extensions to JUnit's Assert to check input streams.

ATestWorkspace

Base class for JUnit tests requiring an IProject.

ProjectBuilder

Builder to create an IProject (incl. contents) as test harness.

AModelLoader

Convenience base class for test classes that need to load models.

AssertEmf

Compares EMF artifacts and renders the differences in human-readable manner, if any.

ATestValidator

Base class for EMF EValidator tests.
